

UPI Integration Integration Document 1.1

UPI Integration in Non Seamless Mode:

There is no changes required from the merchant's end

As UPI is activated from PayU backend and will automatically visible on the payu payment page on redirection.

UPI Integration in Seamless Mode:

For UPI seamless integration you need to send two extra parameter along with the mandatory parameters, please refer to the below details:

Mandatory Parameters:	
key	This parameter is the unique Merchant Key provided by PayU for your merchant account.
txnid	This parameter is known as Transaction ID (or Order ID). It is the order reference number generated at your (Merchant's) end. It is an identifier which you (merchant) would use to track a particular order.
amount	This parameter should contain the payment amount of the particular transaction
productinfo	This parameter should contain a brief product description. It should be a string describing the product
firstname	Self-Explanatory
email	Self-Explanatory
phone	Self-Explanatory
hash	Hash is a crucial parameter – used specifically to avoid any tampering during the transaction.
Extra Parameters(Web Collect):	
pg	Send value "UPI"
bankcode	Send value "UPI"
vpa	send customer vpa in this param
Extra Parameters(QR Flow Transactions):	
pg	Send value "UPI"
bankcode	Send value "UPIQR"
