

Format for posting additional_charges parameter

- **Parameter name** : additional_charges
- **Parameter value** :
IbiboCode:amount/percentage:FLAT/PERC,IbiboCode:amount/percentage:FLAT/PERC,IbiboCode:amount/percentage:FLAT/PERC
 - FLAT indicates adding amount at flat rate
 - PERC indicates adding that much percentage amount to actual amount.
- **IbiboCode** : CC/DC/NB
- **Any combination of ibibo code(s) is possible**

Example:

1. For only CC :

CC:10:FLAT

In this case Rs 10 will be added additionally to all CC transactions.

2. For CC and DC :

CC:10:FLAT,DC:10:PERC

In this case Rs 10 will be added additionally to all CC transactions.

For DC transactions additional 10% of amount will be added.

3. For CC,DC and NB :

CC:10:FLAT,DC:10:PERC,NB:10:PERC

In this Rs 10 will be added additionally to all CC transactions.

For DC transactions additional 10% of amount will be added.

For NB also additional 10% of amount will be added.

Pre Transaction Changes in Hash Sequence :

The pre transaction hashsequence changes from

key|txnid|amount|productinfo|firstname|email|udf1|udf2|udf3|udf4|udf5|||||SALT

to

key|txnid|amount|productinfo|firstname|email|udf1|udf2|udf3|udf4|udf5|||||SALT
|additional_charges

Where additional_charges is the parameter that you are posting to PayU Url.

Post Transaction Changes in hash sequence:

The post transaction hashsequence changes from

SALT|status|||||udf5|udf4|udf3|udf2|udf1|email|firstname|productinfo|amount|txnid|key

to

additionalCharges|SALT|status|||||udf5|udf4|udf3|udf2|udf1|email|firstname|productinfo|amount|txnid|key

where additionalCharges will be posted back to merchant in response array.
